CYBERSECURITY AWARENESS

THE 5 TO STAY PROTECTED ONLINE

1 **STRONG PASSWORD**

Having a strong password is an essential way to stay secure online. ensure you password is atleast 8 characters long and contain combination of letters, numbers and symbols and avoid using words found in a dictionary.

2 **ENABLE TWO-FACTOR AUTHENTICAION**

Two-factor authentication is a second layer security most of the time it gets triggered when you login from an unknown location or device, this helps to ensures it authenticates that right owner before a user logs in.

3 **CHECK IT BEFORE YOU CLICK IT**

Phishing is one of major cyber threats organizations and users face. its simple Don't click on unknown links you receive by texts or emails, ensure that you are at the correct URL beofre login in to anywebsite,

4 **ANTI-VIRUS AND MALWARE TOOLS**

Always ensure that you have an Anti Virus and or Anti Malware software on your computer, they will prevent any malicious software from being installed on your Device. some tools I recommend are AVG Anti Virus, and Malwarebytes, anti-malware program.

5 **UPDATE, UPDATE, UPDATE!!**

Keep your device up to date as this insures that you have the latest security patch on your device to protect you against malicious exploits that a hacker can use to gain access to your computer!
